Two Steps Forward – One Step Back

- There is a very uneasy balance between the slow but continuing growth in the U.S. and the rest of the world. China is still cutting rates and most central banks seem to be racing each other to the bottom in low rates to support their economies and currency.
- The whole picture makes for an uneasy balance even in the States as we claw forward. Unemployment rates are low and have even passed the Fed target, but confidence continues to be a little wobbly and there has been no wage pressure with the improving rate.
- Oil prices have buoyed the consumer and as a result there is some increase in consumer spending. The oil prices have helped consumers but have also hurt companies with higher cost ratios and the banks which loaned them start up funds.
- But with the dollar strong, global trade is restricted for our products. Some fault has to lie with the West Coast port strike but the purchasing managers are seeing general weakness in manufacturing beyond the supply chain interruptions.
- The higher income from jobs and the stable prices should boost consumption and spur manufacturing but price inflation refuses to rise.

Inflation Isn't a Bad Word

SOURCE: WWW.TRADINGECONOMICS.COM | U.S. BUREAU OF LABOR STATISTICS

- Although we have a natural aversion to inflation in economic terms, it is necessary. Without inflation people expect to always see lower prices *tomorrow* so they delay buying. This becomes a spiral and soon there is no spending, hence no manufacturing and onward to loss of jobs.
- Right now we have dis-inflation and need to move the economy to creating some inflation so that we do not fall into deflation. Deflation is extremely hard to counter as Japan has found out the last decade.
- The needed growth in wage pressure, confidence and spending should promote inflation from increased consumer demand. The Fed wants to see 2% inflation before they begin to raise rates.
- Some increase in manufacturing activity hints at some increased demand and as demand rises, so will prices, which demands more manufacturing and will create new jobs.

Rates Drop with Oil

- Rates have moved down across the board moving with dollar strength and the drop in oil prices.
- The Federal Reserve has not hiked rates since 2006 and they appear in no hurry to do so now. Wall Street economists show a more-than-normal lack of consensus on when the Fed will be able to act. Bets remain weighted towards this summer of 2015 but balanced variables will continue to haunt the Committee.
- With the oil price staying in the \$50 trading range, companies earnings' reports for 4Q had many fleeing the stock markets. Central banks are lowering their rates making US rates – with their better credit – again very attractive. Investors continue to pile back into the US Treasuries and agencies taking yields down.
- New bank regulations starting to take effect in 2015, along with serious worries from small oil company failures and loan defaults, will continue to weigh down the banks who still continue to build their balance sheets and shun new deposits and investments.

Various Pooled Funds

As of February 28, 2015

- P&A constantly reviews your portfolio for optimal asset allocation and a controlled average maturity because a diversified portfolio can better adjust to volatile market conditions.
- The extremely low short-term rates make diversification difficult and they are reasonably expected to continue now at least through 2015. Longer term rates have moved lower and do not provide reward for extension risks.
- Banks remain *uninterested* in new deposits and although state and local bonds continue to add value they have been discovered and are declining in yields.
- Portfolios are cash heavy as we struggle to find value with a flat yield curve which provides little value under six months. Going too long has its risks if rates do rise quickly on news.
